The DNA, was obtd. by treating S. sobrinus 6715 with mutanolysin, extracting the chromosomal DNA, partially digesting with Sau3AI and fractionating on agarose gel. The 3-5 kbp fragment was ligated into pUC18 and E. coli JM109 transformed with it. A GT-1 expressing clone was isolated and sequenced. The clone may be used in the development of a drug for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 13; Page 15; 29pp; Japanese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antibody; dental caries; water insoluble glucan synthetase; anti-caries; glucosyl transferase-B; immunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                              The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-17566) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyltransferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyltransferase-B and is used in the immunotherapy of dental caries. This transferase-B and is used in the immunotherapy of dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                    04-OCT-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                  04-OCT-2000; 2000JP-0304889.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             11-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC thanges at positions from TS89D, TS89E, NA71D, NA71D/TS89D, and CM TS89E, NA71D/TS89E). Also included are a glucan produced by the GTF mutant, CC an isolated polymucleotide which encodes pl or P2, or its complementary CC polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, CC an expression cassette comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, comprising the glucan is produced in the amyloplast and/or vector, a starch biosynthesis, transformed with a gene encoding a glucan produced in the smyloplast and/or vector a maize line CC deficient in starch biosynthesis, transformed with a gene encoding a CC plant cell with the vector growing the plant cell under plant suseful comprising the glucan in a plant. The method comprise transforming a plant cell with the vector, growing the plant cell under plant growing CC polymucleotide for a time sufficient to produce the glucan in the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the CC polymucleotide for a time sufficient to produce the glucan in the comprising the glucan protein to produce the glucan plant, where the vector ontains a transit sequence from CC comprising the plant substitutes for and additions to modified starch comprised the plant growing the plant and inducing expression of the cell with the acceptance of potato or the vacuole of sugar beet.

CC glucans are useful as substitutes for and additions to modified starch comprised the plant and glucan cell entities and plant and plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      멼

cc (GFF) B polypeptide having changes at position from 1448V, D457N, D567T, KD194T, D457N/D57TK, D567T/D57TK, CC D567T, KD194T, D457N/D567T, D457N/D57TK, D567T/D57TK, CC D567T, STR/KD194T, 1448V/D457N/D567T/D57TK/KD194TK, CC P169A/K170A/K171A, and K779Q or a GFF D polypeptide having changes at positions from T59D, T59DE, M47D, N47D/T589D, and K779Q or a GFF D polypeptide having complementary an isolated polymunlectide which encodes P1 or P2, or its complementary complymunlectide, a ribonucleic acid sequence encoding the GFF mutant, complementary at the comprising the expression cassette, host cell comproduced by the GFF mutant, complementary and composition comprising the expression cassette, host cell comproduced, a seed or tuber from the transgenic plant comprising the vector, a seed or tuber from the transgenic plant comprising the vector, a seed or tuber from the transgenic plant comprising the plant and starch his produced in the amyloplast and/or vacuole or a maize line comprising the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucan produced with a gene encoding a glucan produced with a gene encoding a glucan produced in the ector, growing the plant and apper and produced in the produce a regenerated plant and expression of the comprising the glucan (paper sizing/coating gent). The vector is useful comprised the produce the plant growing a plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the comprised plant, where the vector contains a transit sequence from the polymuclectide for a time sufficient to produce the glucan in the complementally finendly. Moreover, glucans are and additions to modified starch compared to the paper during coating separation of the present sequence is not shown in the specification but comprised by the indexer using the GFF mutant of the invention.

CC manufacture utilising the just a produce appearing as AAU98027 and the inference as

                                                                   The invention an isolated protein comprising a glucosyltransferase CC (GTF) B polypeptide having changes at position from 1448V, D457N, D567T, K1014T, D457N/D571K, D567T/D571K, D567T/D571K, CC D567T, K1014T, D457N/D567T, D57TK, K1014T, 1448V/D457N/D567T/D571K, K779Q/K1014T, CC Y159A/Y17D4/Y171A, and K779Q or a GTF D polypeptide having CC Y159A/Y17D4/Y171A, and K779Q or a GTF D polypeptide having CC AM71D/T599E. Also included are a glucan produced by the GTF mutant, CC M471D/T599E. Also included are a glucan produced by the GTF mutant, CC an isolated polymuclectide which encodes Pl or P2, or its complementary CC an isolated polymuclectide comprising the expression cassette, host cell CC promoter, a vector comprising the polymuclectide operably linked to a CC promoter, a vector comprising the polymuclectide host cell CC introduced with the vector, a transgenic plant, a paper sizing and/or vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC with a gene encoding the their combinations or glucan and starch where the glucan in starch biosynthesis, transformed with a gene encoding a comprising the glucan produced with a gene encoding a comprising the glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the plant cell under plant, where the vector contains a transit sequence from cregenerated plant, where the vector contains a transit sequence from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          amyloplast; vacuole; paper manufacture; mutant; mutein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic environmentally friendly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                        11-DEC-1998;

Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D/T589D, and N471D/T589E. Also included are a glucan produced by the GTF mutant, an isolated polynucleotide which encodes P1 or P2, or its complementary polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the polynucleotide operably linked to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          D567T/D571K/K1014T, 1448V/D457N/D567T/D571K/K779Q/K1014T

centroused with the vector, a transgenic plant comprising the cotor, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, and the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan (paper sizing/coating agent encoding a glucan in a plant. The method comprises transformed with a gene encoding a comprising the glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a complications to produce a regenerated plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the collymucleotide for a time sufficient to produce the glucan in the collymucleotide for a time sufficient to produce the glucan in the collymucleotide for a time sufficient to produce the glucan in the collymucleotide for a time sufficient to produce the glucan in the collymorphyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Comprise input materials that produce chemical effluents, paper manufacture. Unlike prior art techniques, which creative intermedially friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step.

The present sequence represents a GTFB mutant of the invention.

The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.

plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the created plant, where the vector contains a transit sequence from cribulose biphosphate carboxylase small subunit, waxy, brittle-1 and controphyll AB binding protein to produce a transgenic plant, and glucan cis produced in the amyloplast of potato or the vacuole of sugar beet. Clucans are useful as substitutes for and additions to modified starch crequire input materials that produce chemical effluents, paper canditative utilising the glucan produced by GTF, which utilises convironmentally friendly Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. Clark present sequence represents a GTFB mutant of the invention but canditation the information in claim is

```
Glucosyltransferase B or D protein useful for producing a glucan as substitutes for and additions to modified starch and latexes i paper manufacture, comprises mutations in specific positions
                                                                                                                                                                                 useful
```

44pp; English.

cc promoter, a vector comprising the expression cassette, host cell
cc promoter, a vector comprising the expression cassette, host cell
cc introduced with the vector, a transgenic plant comprising the
cc vector, a seed or tuber from the transgenic plant, a paper sizing and/or
cc coating composition comprising a glucan produced in a plant transformed
cc with a gene encoding the mutant GTF, wild type or, starch, a latex,
cc the glucan is produced in the amyloplast and/or vacuole or a maize line
cc the glucan is produced in the amyloplast or glucan and starch where
cc the glucan is produced in the amyloplast or glucan and starch where
cc deficient in starch biosynthesis, transformed with a gene encoding a
cc glucosyltransferase B or D enzyme, wild-type or mutant and a paper
cc comprising the glucan (paper sizing/coating agent). The vector is useful
cc gonditions to produce a regenerated plant and inducing expression of the
cc polynuclectide for a time sufficient to produce the glucan in the
cc ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and
cc chlorophyll AB binding protein to produce a transgenic plant, and glucan
is produced in the amyloplast of potato or the vacuole of sugar best.
cc glucans are useful as substitutes for and additions to modified starch
cc and latexes in paper manufacture. Unlike prior art techniques, which
cr require input materials that produce dby GTF, which utilises
biologically produced input materials, is more cost-effective and
cc properties and impart gloss to the paper during coating step.
cc biologically presents exquence is not shown in the specification but
was created by the indexer using the GTFB sequence appearing as AAU98027
and the information in claim 36. (GTF) B polypeptide having changes at position from I448V, D457N, D567T, K1014T, D457N/D567T, D457N/D571X, D57TN/D571X, D567T/D571X, D5 invention an isolated protein comprising 1475 AA; a glucosyltransferase on from I448V, D457N, or its complementary inked to

The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from I448V, D457N, D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K,

```
CC V169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having CC changes at positions from T589D, T589F, M971D M971D/T589D, and CM97D/T589E. Also included are a glucan produced by the GTF mutant, CC an isolated polymuclectide which encodes P1 or P2, or its complementary CC polymuclectide, a ribonucleic acid sequence encoding the GTF mutant, CC an expression cassette comprising the polymucleotide operably linked to a CC promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/or CC vector, a seed or tuber from the transgenic plant, a paper sizing and/or CC vector, a seed or tuber from the transgenic plant, a paper sizing and/or CC vector, a seed or tuber from the transgenic plant, a paper sizing and/or CC vector, a seed or tuber from the transgenic plant, a paper sizing and/or CC vector, a produced in the amyloplast and/or vacuole or a maize line CC plucan is produced in the amyloplast and/or vacuole or a maize line CC plucan is produced in the amyloplast and/or vacuole or a maize line CC plant cell with the vector, growing the plant cell under plant sprowing CC conditions to produce a regenerated plant and inducing expression of the CC regenerated plant, where the vector contains a transit sequence from CC plucans are useful as substitutes for and additions to modified starch CC glucans are useful as substitutes for and additions to modified starch CC glucans are useful as substitutes for and additions to modified starch CC glucans are useful as substitutes for and additions to modified starch CC environmentally friendly. Moreover, glucans also exhibit thermoplastic CC properties and impart gloss to the paper during coating step.

CC manifacture utilising the glucan produce the plant and other to produce of the present sequence represents a GTFB mutant of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch glucans are useful as substitutes for and additions to modified starch
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ribulose biphosphate carboxylase small subunit, waxy,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Streptococcus mutans monoclonal antibody-related protein #1
                                                                      The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-1756) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This transferase-B and is used in the immunotherapy of dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Streptococcus mutans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibody; dental caries; water insoluble glucan synthetase; anti-caries; glucosyl transferase-B; immunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13-AUG-2002
                                                                                                                                                                                                                                                                                Anti-caries agent composed of a monoclonal antibody against inhibitory enzyme against water insoluble glucan synthetase transferase-B (GTF-B) of Streptococcus mutans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        04-OCT-2000; 2000JP-0304889
